## KOOL & KALM ULS®

© 2008 Aussie Logic Liberty Hill, TX

**Aussie Logic Kool & Kalm ULS is a low starch formulation of Kool and Kalm. It is designed specifically for those horses who have been prescribed a low starch diet because they have Equine Metabolic Syndrome, Insulin Resistance or other condition that precludes a higher starch feed. Horses on Kool & Kalm ULS need no additional supplementation as all minerals and vitamins necessary for optimum health are in the feed**

**An extruded feed with particle size suitable for all ages of horses.** Wet steam extrusion increases the digestibility of the feed to +/- 95%. The particle size makes it useful as a feed for foals to senior horses.

**High quality alfalfa is the fiber source.** Alfalfa is recognized as one of the leading sources of digestible fiber for livestock. The use of high quality dehydrated alfalfa as the primary digestible fiber source ensures a consistent rate and extent of digestion reducing the possibility of digestive problems. Extrusion further enhances the digestibility of this fine fiber source.

**Starch sources are transformed in extrusion.** The small amount of starch that is present in the feed is modified during the extrusion process to reduce the possibility of fermentation in the cecum. The starch is fully digested not excreted.

**Balanced levels of Calcium, Phosphorus, Potassium and Magnesium.** Ensure the right amounts of nutrients are present for growth, nervous system function & bone and joint health .

**Correct type and level of B complex vitamins.** With the correct level of the B vitamins bacterial growth is promoted in the hind gut which leads to improved digestion of all sources of fiber. B vitamins are also important in building a calm disposition in the horse.

**Correct levels of Choline.** With correct choline levels the horse is able to focus better and has an improved attitude towards work.

**Amino Acid Complex forms of Copper Manganese and Zinc.** These ensure the maximum biological availability of these trace elements that are critical for immune function and hoof health.

**Methionine, Lysine, Biotin and Iodine.** These micro nutrients are all supplied in the correct form and ratio to ensure a strong immune system and optimal hair and hoof growth.

**Tasco™.** This patented brand of seaweed supplies Organic Iodine, sulfonated short chained polysaccharides and L-fucose. These improve the immune system, control gram negative bacteria in the gut, improve nerve function, improve long term memory and improve blood flow. Improved blood flow means horses can work harder longer and will not lather as much and will cool down more quickly. In stud horses fertility will also be improved.

**Yucca Extract .** Yucca reduces the odor of manure and urine helping to control flies as well as improving feed utilization.
